Radiator Notes ! Petcocks 17-148 or 17-148RP are not included, order separately. Original V8 radiators mounted on engine side of radiator support, original 6 cyl. cars mounted radiator on grill side of support. Check your radiator support mounting before ordering. If the radiator mount brackets are on the engine side of the support you have a V8 support, if the mount brackets stick out in front of the support you have a 6 cyl. support. The cooling capacity is the same on 6 or V8 radiators. In fact if you are building a modified car it is better to mount the radiator in front of the support. You will have more clearance for pulleys and accessibility plus you can mount the mechanical &/or electric fan of your choice. All radiators no name or numbers stamped into the top tank. Note; V8 position radiators wider bottom tank this requires the filler panel in bottom of V8 support, to be removed. *Oversize shipping. Big block installations use 17-278, 278A. Use 13 lb cap .
